Summary

As a platform-focused software engineer, I build the infrastructure and observability foundations that teams want to inherit. I have led cloud platform and monitoring migrations at scale with zero-downtime cut-overs, scaled critical observability infrastructure, and created delightful user experiences for both end-users and other developers.

Experience

Software Engineer

Mountain View, CA

ID.ME

May 2024 - March 2025

- Led cloud platform migration for core identity verification services, containerizing applications and building Terraform infrastructure-as-code to enable seamless cutover with zero downtime
- Migrated observability infrastructure from a managed SaaS backend to self-hosted Mimir deployed on GKE
- Built comprehensive monitoring and alerting for Consul/Envoy service mesh to enable faster incident response
- Designed self-service APIs for promotional partner campaign management and reporting
- Improved community verification flow conversion rates by 10% through UX simplification and friction reduction

Tech Lead

San Francisco, CA

ACCENTURE (CITIBANK)

November 2021 - June 2023

- Configured and tuned Trino distributed query engine for petabyte-scale data access to Hadoop, Hive, and S3 data stores
- Wrote SQL transformations and data validation scripts to standardize query interfaces across siloed legacy systems, enabling sub-minute query latency for compliance workflows

Software Engineer

Seattle, WA

EY

August 2018 - October 2021

- Developed CI/CD pipelines in Azure DevOps, resulting in both higher deployment frequency and lower change failure rate
- Implemented incremental algorithms for expensive updates and sub-graph caching improvements that reduced memory footprint of complex scenario simulation queries by up to 50%
- Built internal data ingestion framework on Python/Scrapy with reusable abstractions and monitoring hooks that replaced ad-hoc scraper implementations to reduce development time for new data pipelines

Education

University of Alabama

BS Mathematics, Computer Science, Finance

TEACHING ASSISTANT, PRESIDENT'S LIST, NATIONAL MERIT SCHOLAR

August 2014 - May 2018

Georgia Institute of Technology

Coursework toward MS in Computer Science

SYSTEMS TRACK

August 2022 - May 2024

Skills

Languages

Python, Go, TypeScript, Node.js, SQL, C, Ruby

Infrastructure

Terraform, Docker, Kubernetes, Nomad, Consul, Envoy

Platforms & Tools

GCP, AWS, GitHub Actions, Grafana, Prometheus, Mimir

Databases

Postgres, Trino/Presto, Redis, MS SQL Server, Neo4j
